	Claims		NO

2. Citations and explanations

None of the documents cited in the ISR describes a self-supported manually elevating screen in which right and left slide members capable of sliding are installed to at least either right and left upper arms or right and left lower arms and connected with each other so that they can be revolved relative to each other on the vertical line positioned on a screen virtually at the center in the horizontal direction of the screen. This constitution is not an obvious matter either.
